

EQUIPMENT CALIBRATION

Recommended Equipment Maintenance Protocols:

- Check and adjust any equipment when it has been damaged.
- Check, adjust and perform maintenance on equipment in house at least once per year or send equipment out for adjustment and maintenance at least once per year.
- Follow the manufacturer's specifications for equipment maintenance schedules and requirements.
- Check and adjust equipment when it is in heavy use.
- Check and adjust equipment when it is coming back into use after being unused for some time.
- Confirm equipment that is new or rented.
- Regularly check and adjust prism poles, tribrachs, etc.
- Maintain a record of checks and adjustments to each piece of equipment, in accordance with Section 1.12 of the National Standards for the Survey of Canada Lands.
