

Dr Rodriguez stands on 26 years of professional experience as an international expert in geomatics and information technology as well as in cadastre and geographic information systems, including more than 15 years in various upper management and strategic planning positions.

He holds a Doctorate in Geomatics from Laval University, focused on the design and evaluation of innovative approaches for the implementation of geospatial data infrastructures in public and private organizations.

Mr. Rodriguez's professional experience includes the design and deployment of several studies and projects in geomatics in Québec and abroad. He was regional director for multinationals AECOM and the SM International Group.

He is Head of the Infoterritoire Division, division responsible for geomatics at the City Planning and Sustainable Development Department of the City of Gatineau, leading, among other things, the project to develop a new map of flood zones and risks associated with floods for the Outaouais region.

President of the Ordre des arpenteurs-géomètres du Québec, he promotes a vision of the future that will help develop the professional practice of land surveyors and land surveyors in Québec, in the light of international trends in matters of intelligent cities, artificial intelligence in the geospatial domain and the internet of geoconnected objects.
